ZENTOX INTRODUCES PHOTOX™ 100 *FOR PORTABLE ADVANCED AIR PURIFICATION*

NEWPORT NEWS, Va. (May 2, 2006) – Zentox now offers the Photox 100, a portable air purifier for control of point-source odors and removal of volatile organic compound (VOC) contaminants.

The Photox 100 is a smaller, portable version of the company's Photox 500 advanced air purification system.

Based on photocatalytic oxidation technology (PCO), Photox is designed to remove noxious odors, toxic vapors and infectious organisms from the indoor environment.

Photox effectively removes a variety of hazardous and objectionable airborne contaminants including bacteria, virus, mold, ammonia, cleaning solvent vapors, paint odor, ozone, hydrogen sulfide, urine/fecal odors, cooking odors, carbon monoxide and formaldehyde.

"Photox can remove harmful or annoying contaminants from the air in a wide variety of indoor environments," said Bob Kim, Zentox marketing director. "The smaller size of the Photox 100 allows you to take the unit to the source of your problem easily and cost effectively."

The Photox 100 is ideally suited for use in problem areas in homes, hospitals, schools, office buildings, medical offices, laboratories, restaurants and nursing homes.

Safe to use, Photox does not emit any harmful products or ozone. Destruction of contaminants occurs completely inside the unit. Photox is easy to operate and maintain. The system simply requires annual replacement of lamps and catalytic reaction modules.

Established in 1997, Zentox specializes in innovative air purification and industrial water services technologies. The company is located in Newport News, Va. For more information, contact Zentox Corporation at 757-369-9870, by fax at 757-369-9871 or by email at info@zentox.com. Visit the company's website at www.zentox.com.
